

It must first be understood that “global warming” rebranded as “climate change” & many untraditional “environmental groups” are being used to further globalization & its many forms of usury.

Geothermal Energy Plan

Eco-Resorts & Greenhouses

plus

Power To The People!

Traditionalism, Localism & Nationalism is the way forward. We must end usury & globalization & work towards energy independence.

Geothermal History

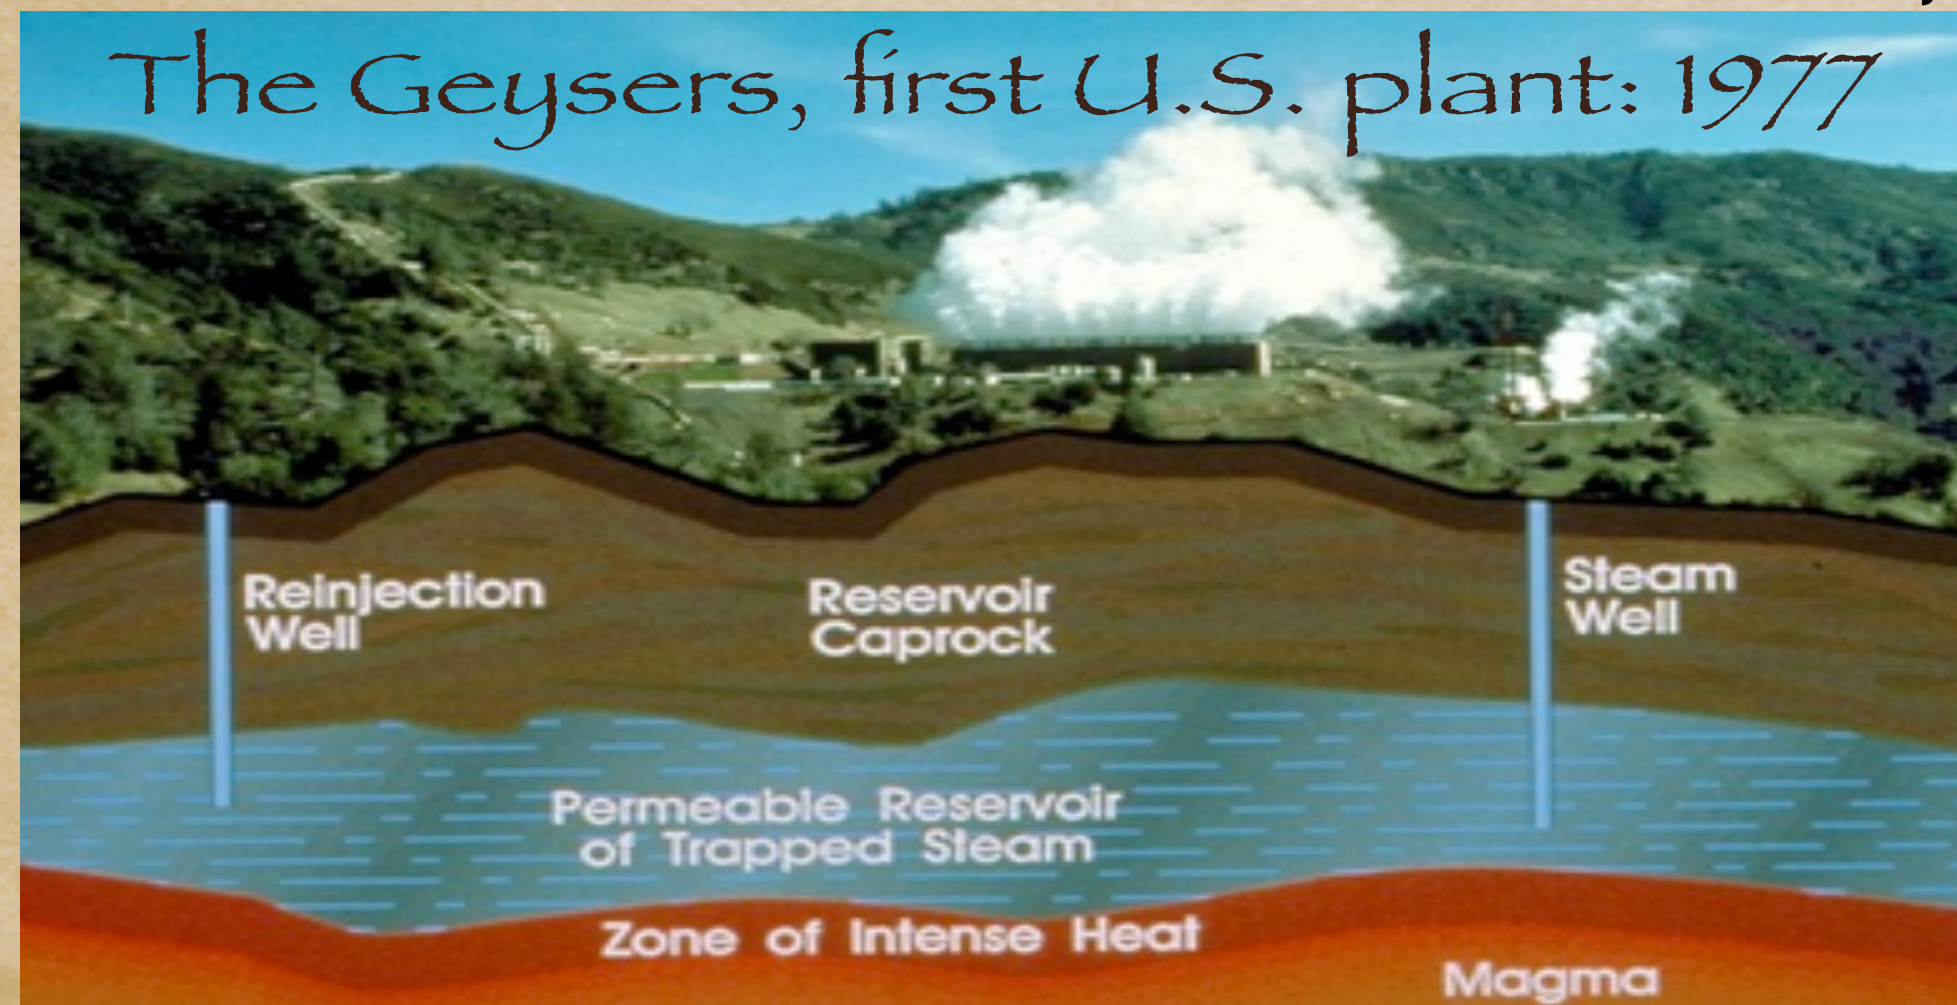

The Germans, Icelanders & Japanese were all using geothermal energy long ago.

Native Americans age old use of hot springs.

First Geothermal Power Plant, 1904, Larderello, Italy

The Geysers, first U.S. plant: 1977

Japan has a long history of geothermal use.
Both bathing & heating

The Plan

- ◆ Build multiple geothermal power plants.
- ◆ Build an eco-resort at each power plant, pumping waste water (which is just hot mineral water) into spa pools and geothermal greenhouses. These resorts will also serve to educate the public about the green energy paradigm.
- ◆ Then nationalize these geothermal power plants within 30 years but investors keep eco-resorts & greenhouses & the income tax/slave-tax ended in exchange.

Research, Development & Funding

- ~ Find geothermal active locations/sites & secure/purchase them.
- ~ Make deals with companies that build geothermal power-plants.
- ~ Work with citizens groups & lobbyists to push governments into funding geothermal energy projects.
 - ~ Accept non-usurious private investments.
 - ~ Seek investment from ethically funded nonprofits & Ngo's.
- ~ Make deals with various citizen groups to force their governments to end the income-tax/slave-tax & invest their tax funds into geothermal power-plants.
 - ~ Work with traditional preserve & protect environmental groups to raise awareness about the various geothermal power options.

Examples

Iceland!

Geothermal Greenhouses

With the effects of global warming increasing domestic food security is a must. We can grow all our own foods cheaply in all seasons with geothermal greenhouses.

Heat from the earth: How to heat with near-surface geothermal energy

- 1 The earth heats a transfer fluid, which flows through a collector or probe.
- 2 A heat pump extracts the heat from the heat transfer fluid and compresses it to higher temperatures. Heat pumps are based on a similar principle to refrigerators.
- 3 The geothermal energy is stored and is available for space heating and water heating.

THE NUCLEAR POWER & PETROCHEMICAL PARADIGM
IS EXTREMELY TOXIC & MUST BE TIGHTLY
REGULATED, RESTRICTED & PHASED OUT.

"I foolishly once believed the myth that nuclear energy is clean & safe. That myth has completely broken down. Restarting nuclear reactors while we still have no place to dispose nuclear waste is a criminal act toward future generations."

~ Morihiro Hosokawa, 79th Prime Minister of Japan

ON EARTH

NO
FRACKING
WAY!

Why Nationalize?

- ◆ 1) This plant will be built with government subsidies & grants which comes from taxes/public money, so we believe it should be returned to the public after the private investors have recouped their investment plus some % of interest. This is a ethical choice and will serve to teach other corporations and the investment class that it is a privilege to do business in our societies, not a right. This will remind them about public service over endless profit.
- ◆ 2) Because public opinion has rightfully turned against unbridled capitalism that seeks profit at all costs with no regard for public health or the environment. Globalization and its many forms of usury is over!
- ◆ 3) Because the energy sector should be totally decentralized or at the least out of a fews privileged and private hands. Eventually individual homes/families should supply all their own energy needs through solar, wind, geothermal/heat pumps, recycling their own waste water, growing a percent of their own food, as well as driving electric vehicles etc. True freedom & energy independence + ending globalization, debt & usury is also key.

Before & After

Reykjavik Using Fossil Fuels

Reykjavik Using Geothermal
